* NOTE: This is a 'working draft' sequence. It currently

* consists of 48 contigs. The true order of the pieces

* is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             contig of 1102 bp in length

ADH13942

ADH13942;

The invention relates to a novel nucleic acid molecule (I) comprising a sequence encoding monocyte-chemoattractant-protein-1 (MCP-1) or a protein having the biological activity of MCP-1. A protein encoded by a nucleic acid of the invention has cytostatic, and antiarteriosclerotic activity. A nucleic acid of the invention may have a use in gene therapy. A compound of the invention is useful in the preparation of a medicament for the treatment of atherosclerosis or cancer e.g. cervical carcinoma. A Novel nucleic acid molecule encoding monocyte-chemoattractant-protein-1, useful in gene therapy, for treating atherosclerosis and cancer. ds; human; monocyte-chemoattractant-protein-1; MCP-1; cytostatic; antiarteriosclerotic; gene therapy; atherosclerosis; cancer; Human monocyte-chemoattractant-protein-1 related DNA SEQ ID NO:5. gene encoding an antigen of Epstein-Barr virus (EBV). The human cell line, compositions and methods are useful for inducing or stimulating an immune response in a human to an EBV-associated cancer, where the human has or is at risk for Hodgkin's lymphoma, nasopharyngeal carcinoma, pastric carcinoma, Burkitt's lymphoma, T-cell lymphoma, B-cell lymphoma, parotid carcinoma, breast carcinoma, and leiomyosarcoma. The present sequence represents a nucleotide sequence associated with the cell line
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human Cc12 promoter region used for gene knockout animal models SeqID

             This invention relates to a novel methods and animal models for testing candidate drugs that can be used for the treatment or prevention of agerelated macular degeneration (AMD). Specifically, it refers to administering a candidate drug to gene knockout mice, in particular CC12-deficient, CCr2-deficient and/ or a Cc12-deficient/Ccr2-deficient dual knockout mouse. The present invention describes analysing the knockout mouse eye for development or regression of drusen and/ or lipofuscin accumulation, as well as for the effect of a candidate drug on Bruch's membrane, retinal degeneration and/ or choroidal neovascularisation. Accordingly, such compositions exhibit ophthalmological activities and can be used for gene therapy purposes. This polymucleotide sequence is the human Cc12 promoter region DNA of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a novel methods and animal models for testing candidate drugs that can be used for the treatment or prevention of agerelated macular degeneration (AMD). Specifically, it refers to administering a candidate drug to gene knockout mice, in particular Ccl2-deficient, Ccr2-deficient and/ or a Ccl2-deficient/Ccr2-deficient dual knockout mouse. The present invention describes analysing the knockout mouse eye for development or regression of drusen and/ or lipofuscin accumulation, as well as for the effect of a candidate drug on Bruch's membrane, retinal degeneration and/ or choroidal neovascularisation. Accordingly, such compositions exhibit ophthalmological activities and can be used for gene therapy purposes. This polynucleotide sequence is the human Ccl2 gene and enchancer region DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240
Cc12-deficient, Ccr2-deficient knockout mouse, and or regression of drusen and/or lipofuscin

                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides a number of human immune system associate genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurotibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, necoascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute mysloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumacoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (1) for screening drug candidates; (11) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (111) for screening of a bioactive agent capable of modulating the activity of CAP; (1v) for carcinoma; (vi) for inhibiting the activity of CAP; (vi) for diagnosing carcinoma; (vi) for inhibiting the effect of CAP; (vi) for treating carcinoma; (vii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma are appensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       105675 TTCACAGTCAACACGCAATGAAAGTTTATGAATTTCTCTTTTTATGCTTTGAAGACATA 105616

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MOOR/
    The invention relates to novel mucleic acids encoding novel human foetal antigens. The nucleic acids and proteins are used to prevent, treat (e.g. by gene therapy) or ameliotate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a condition. The antibodies to the antigens can also be used in alleviating symptoms associated with the disorders and in diagnostic for in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbent assays (ELISA). Disorders which are diagnosed or treated include autoimmune to diseases e.g. rheumatorid arthritis, hyperproliferative disorders e.g. cardiovascular disorders e.g. cerebral ischeemia, angiogenesis, carrest, cerebrovascular disorders e.g. cerebral ischeemia, angiogenesis, necylasms of the breast or liver, cardiovascular disorders e.g. cerebral ischeemia, angiogenesis, or arrest, cerebrovascular disorders e.g. cerebral ischeemia, angiogenesis, cerevous system disorders e.g. Alzheimer's disease, infections caused by charteria, viruses and fungi and ocular disorders e.g. corneal infection.

The polypoptides can also be used to aid wound healing and epithelial colleration, to prevent skin aging due to subburn, to maintain or organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease corrects and other nutritional components. Numerous also be used as a food additive or preservative to increase or decrease corrects and disorders and other nutritional components. Numerous examples of diseases and disorders treated by the nucleic acids and component but a gene encoding a foetal antigen of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         7072 CTCTAATATACATTTAAAATTTTTCACAATAAAAATTTAAAAATTTTGCCTTGGATCTTT 7013
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       7012 AATTTTTTACATCACTGCCCATATATATTTTCTAAGAAAAATACTGTAAAATTGAATA 6953

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed crivity of (II) is useful in gene therapy techniques to restore normal activity of (II) so to treat disease states involving (II). (II) is useful in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations diagnostics. Forensics disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences has and products dependent on DNA and and a contact the sequences has a product dependent on DNA and a contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact contact c

The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase and T4 polymerase (plant) T6 polymerase and T6 polymerase and T6 polymerase and T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T7 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6 polymerase (plant) T6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     207

MBNAAA-239SAC Necator americanus (parasitic nematode) mixed adult
Necator americanus cDNA clone MBNAAG-239 5' similar to from Necator
americanus EST cluster NAC00239, mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Eukaryota, Metazoa, Nematoda, Chromadorea, Rhabditida, Strongylida, Ancylostomatoidea, Ancylostomatidae, Bunostominae, Necator.

; Sequence 16038, Application US/09949016
; Patent No. 6812339
; Patent No. 6812339
; GENERAL INFORMATION:
; APPLICANT: VENTER, J. Craig et al.
; TITLE OF INVENTION: POLYMORPHEMS IN KNOWN GENES ASSOCIATED
; TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
; TILE REFERENCE: CL001307
; CURRENT APPLICATION NUMBER: 60/241,755
; PRIOR PALLICATION NUMBER: 60/241,755
; PRIOR PALLING DATE: 2000-10-03
; PRIOR PAPLICATION NUMBER: 60/231,768
; PRIOR APPLICATION NUMBER: 60/231,498
; PRIOR PELING DATE: 2000-10-03
; PRIOR PELING DATE: 2000-09-08
; NUMBER OF SEQ ID NOS: 207012
; SOFFTWARE: RESELECT FOR Windows Version 4.0
APPLICANT: VENTER, J. Craig et al.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 17484, Application US/09949016

Patent No. 681239

GENERAL INFORMATION:

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;

FILE REFERENCE: CLO01307

CURRENT APPLICATION NUMBER: 00/09/949,016

CURRENT PAPLICATION NUMBER: 60/241,755

PRIOR PELING DATE: 2000-10-20

PRIOR PELING DATE: 2000-10-03

PRIOR PELING DATE: 2000-10-03
